

Practical 2

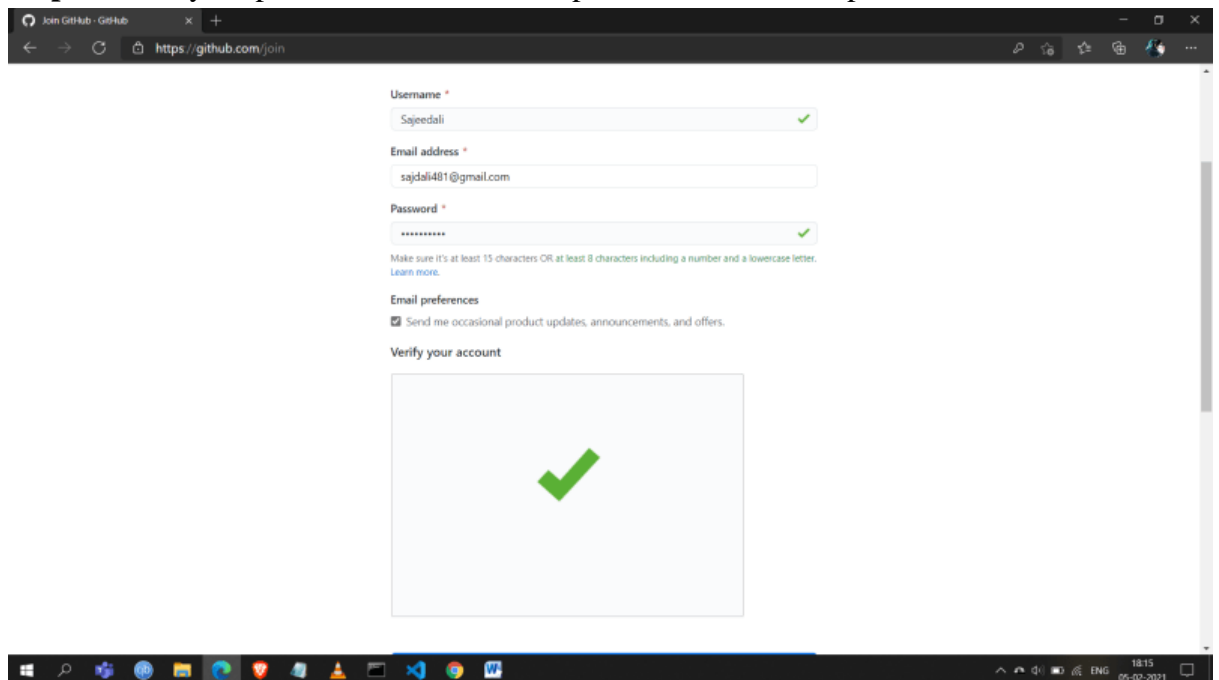

Creating account, repository on Github and Cloning repository in Github.

a) Creating Account:

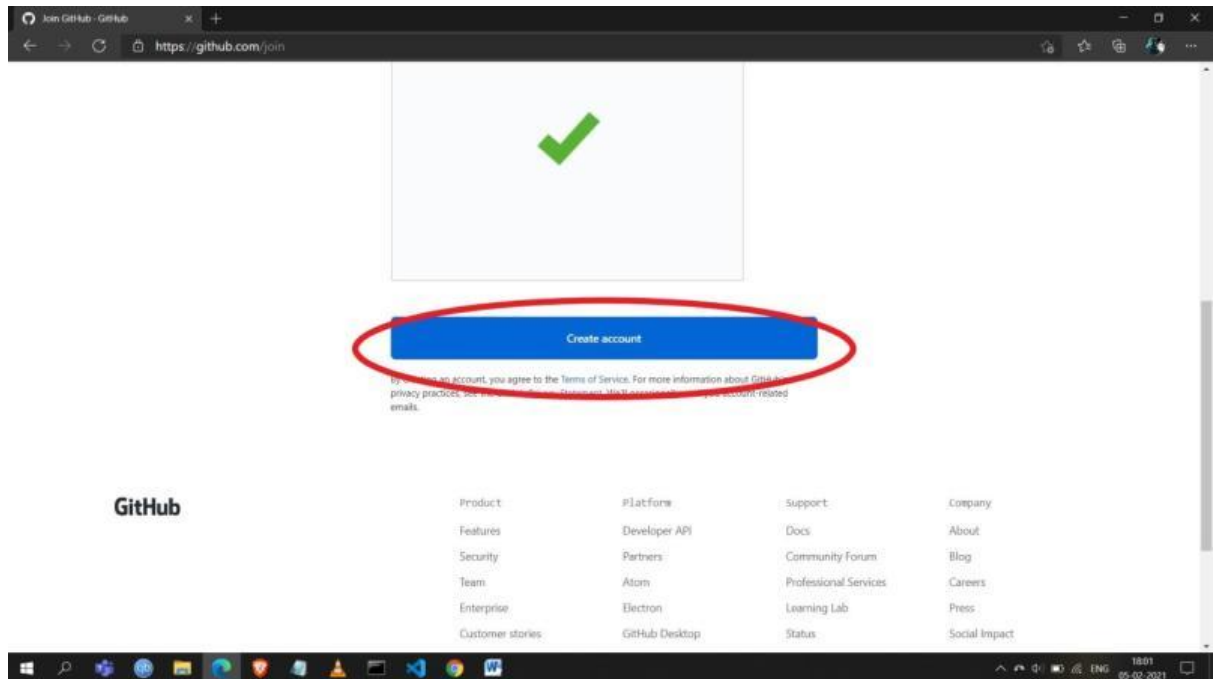

Step 1: Go to <https://github.com/join> in a web browser. You can use any web browser on your computer, phone or tablet to join.

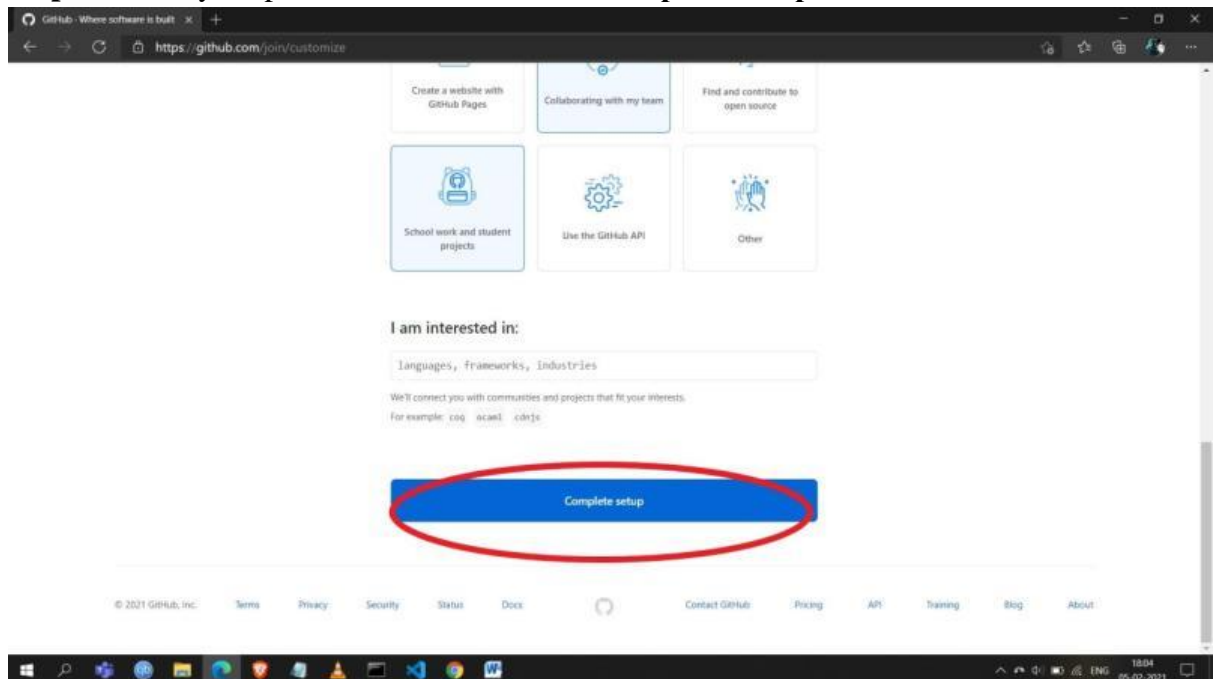

Step 2: Enter your personal details and complete the CAPTCHA puzzle.

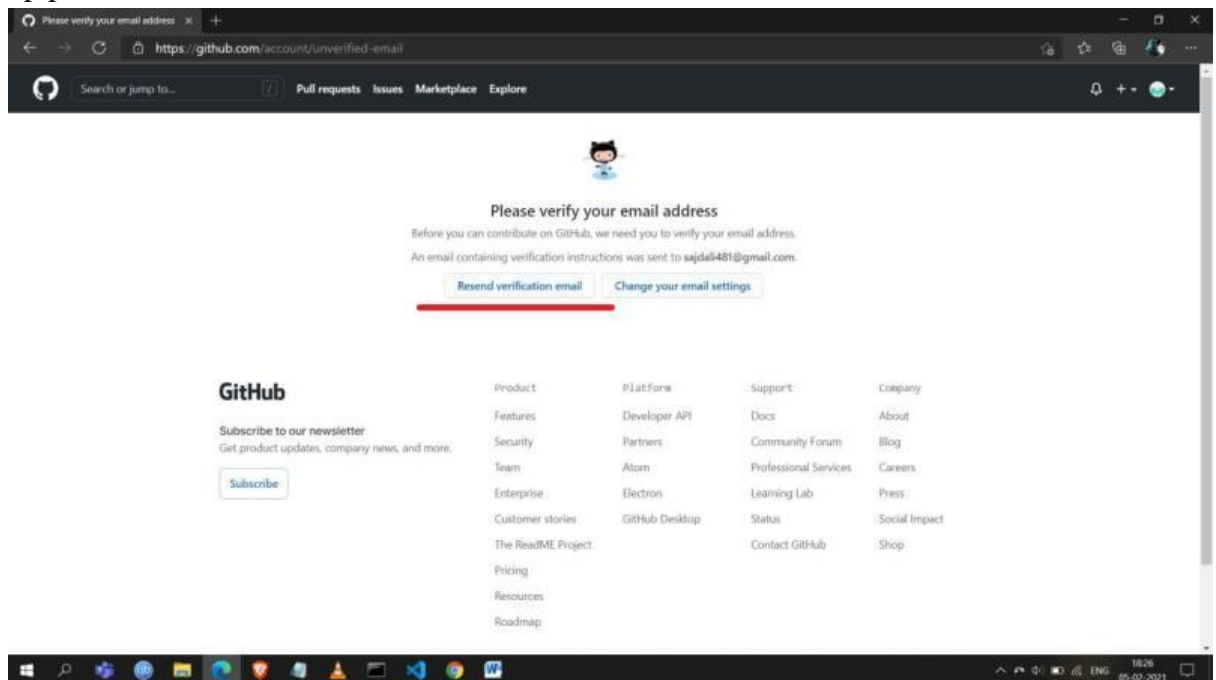

Step 3: Click the ‘Create account’ button below the form.

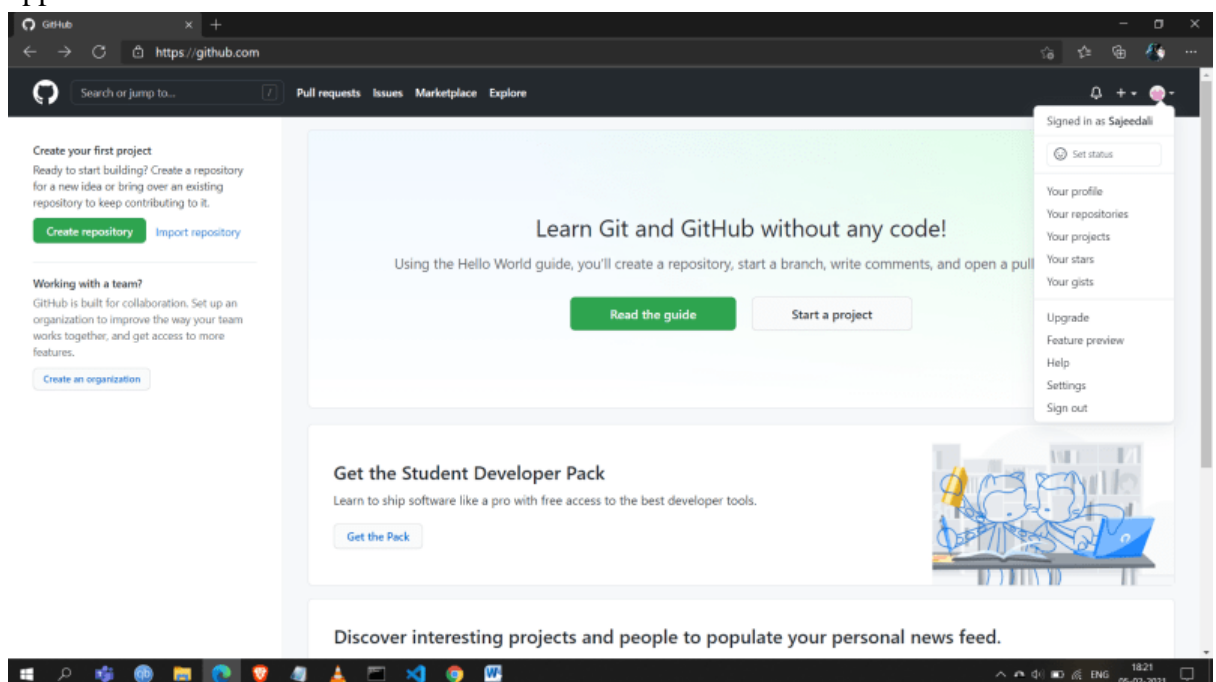

Step 4: Select your preferences and click on ‘Complete Setup’.

Step 5: Verify your email. This confirms your email address and returns you to sign up process.

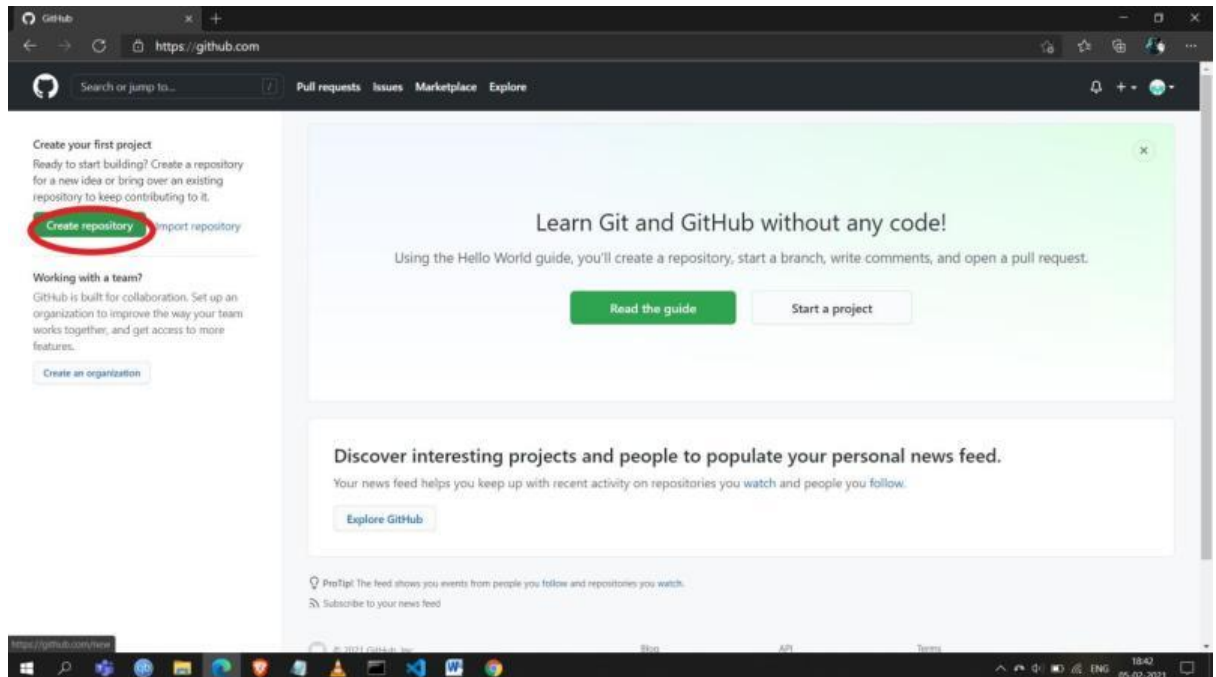

Step 6: After the email verification the account will be created. The below page will appear once the account is created.

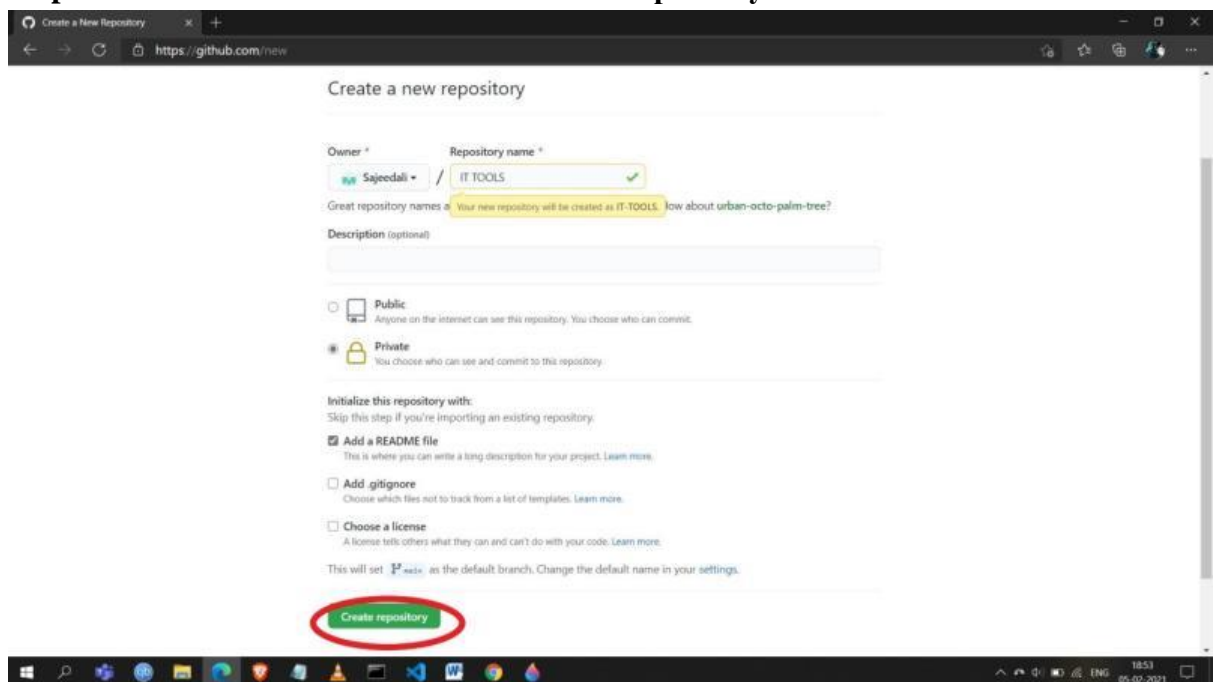

b) Creating Repository:

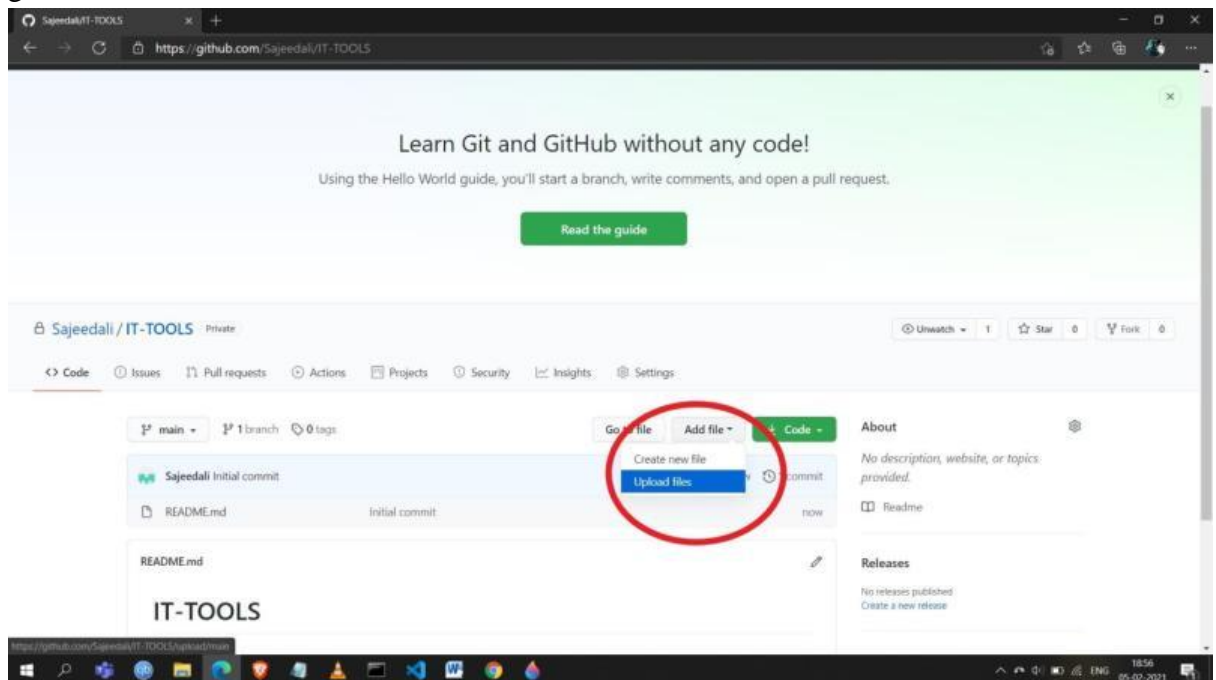

Step 1: Click on the ‘Create Repository’ button given on the left side.

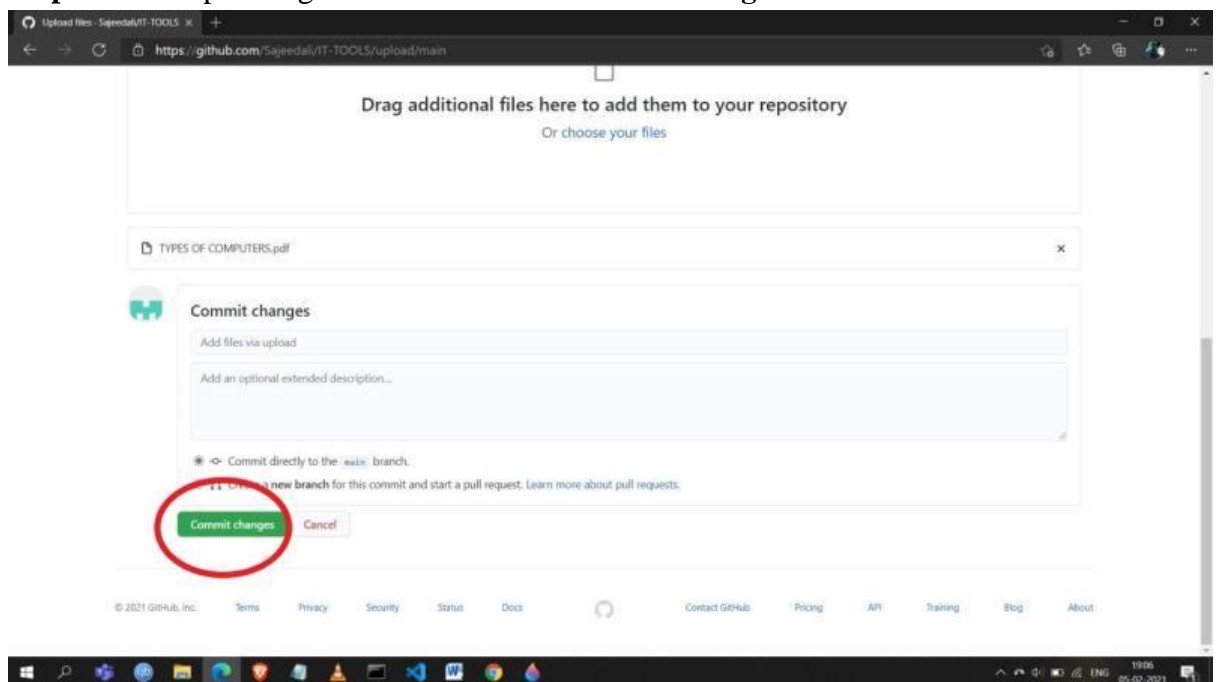

Step 2: Fill the details and click on the ‘Create repository’ button below.

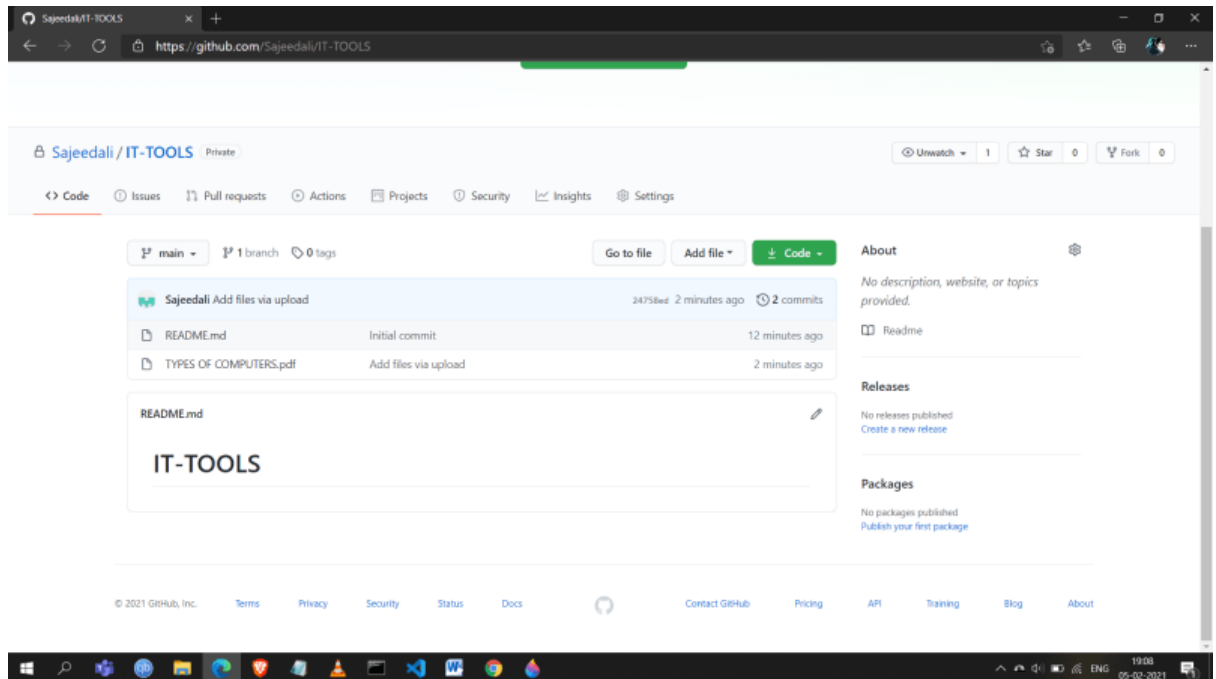

Step 3: You can also create or upload files in your repository from your system as given below.

Step 4: After uploading files click on the 'Commit changes' button.

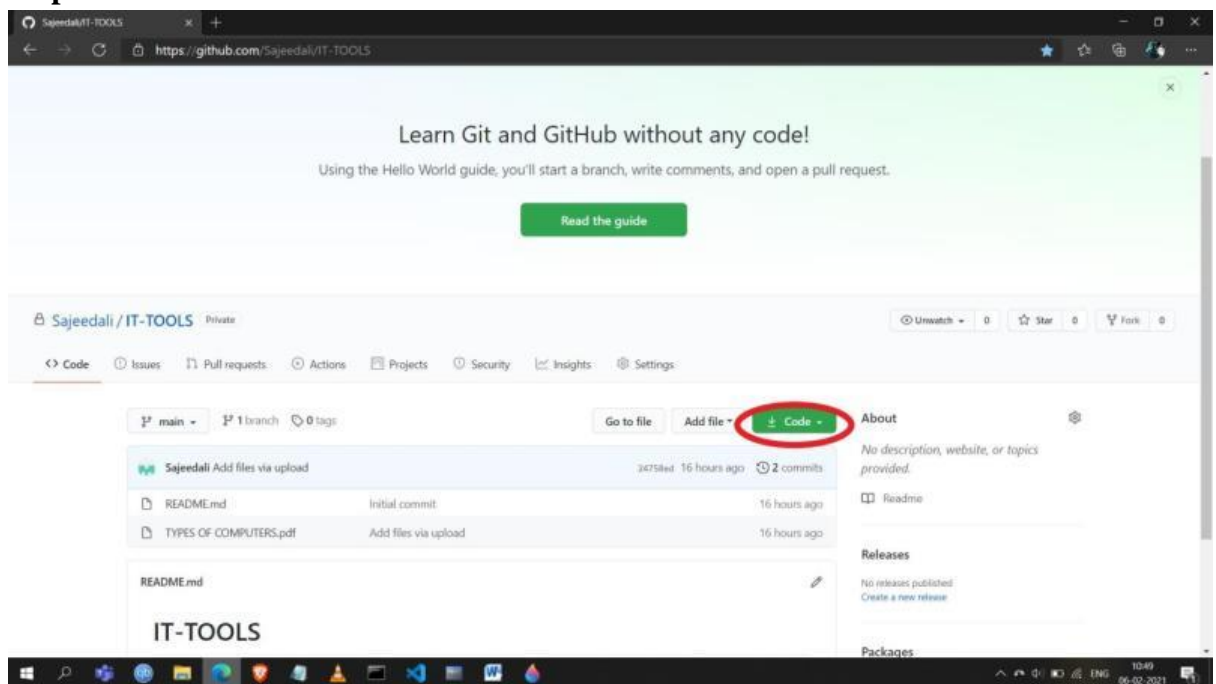

Step 4: Now the repository has been created as you can see below.

c) Cloning Repository:

Step 1: Click on the 'Code' button as mentioned below.

Step 2: Click on the clipboard icon as mentioned to copy the url. It will create a clone of your repository.
